

X-Band Toroid Ferrite Phase Shifters

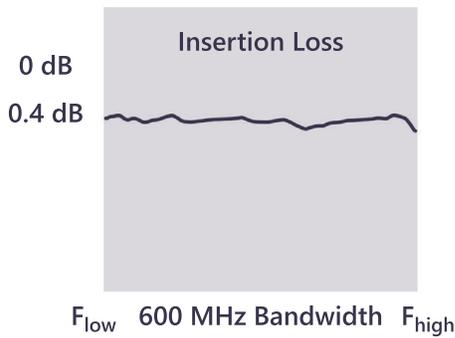

Good VSWR
Low Insertion Loss
Minimal Insertion Phase Variation

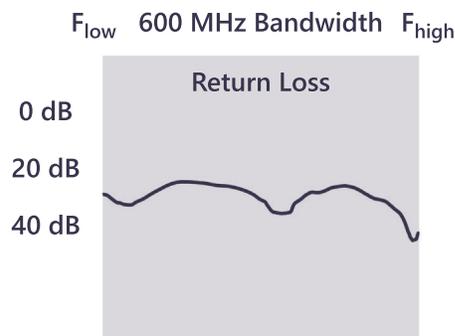

Microwave Applications Group (MAG) continues to broaden its product line in response to customer requests and is pleased to offer non-reciprocal toroidal phase shifters. Several production quantity orders of these X-Band units have been delivered and accepted.

Tuning inputs and outputs yields successful performance over a minimum of 600 MHz bandwidth at different points in the X-Band range.

Other toroid phase shifter and switching devices have been provided by MAG. In addition to performance requirements, devices are customized for interface and dimensional needs as specified

Measured values taken at lab ambient
